

Sven the Cactus presents...

Word Adventures

The word of the week is:

Also known as sea jellies, jellyfish have been around for millions of years. These water creatures can be found in both cold and warm waters along deep and shallow coastlines.

Jellyfish come in various shapes and colours and they can be bioluminescent which means they can produce their own light.

Jellyfish have no brain, heart, bones, or eyes. They are made of a smooth bag-like body and tentacles with tiny, stinging cells. Jellyfish use their tentacles to stun and paralyze their food before eating it.

They like to eat food that consists of fish, shrimp, crabs and tiny plants very quickly. Foods that allow them to stay afloat and not be weighted down by large and undigestible food.

Word Adventures: Jellyfish

Activity of the week: Math Square Puzzle

Fill in the missing numbers:

The missing values are the whole numbers between 1 and 25.

Each number is only used once.

Each row is a math equation.

Each column is a math equation.

Remember that multiplication and division are performed before addition and subtraction.

	-	15	+		+		+		52
-		-		-		-		+	
	-		+		-		+		19
-		+		-		-		-	
	+		+		-		+	23	45
